

MISSION SUCCESS STORY

Marvin I. was admitted to Solara Hospital in June 2023 due to a sacral abscess and decubitus ulcer. With treatment, he improved and was transferred to Mission Nursing and Rehab several weeks later. He was evaluated by our therapy team and showed impairments in strength, activity tolerance, dynamic sitting balance, dynamic standing balance, coordination, FM/GM skills, muscle recruitment, stability and endurance affecting ADLs, bed mobility, transfers and ambulation.

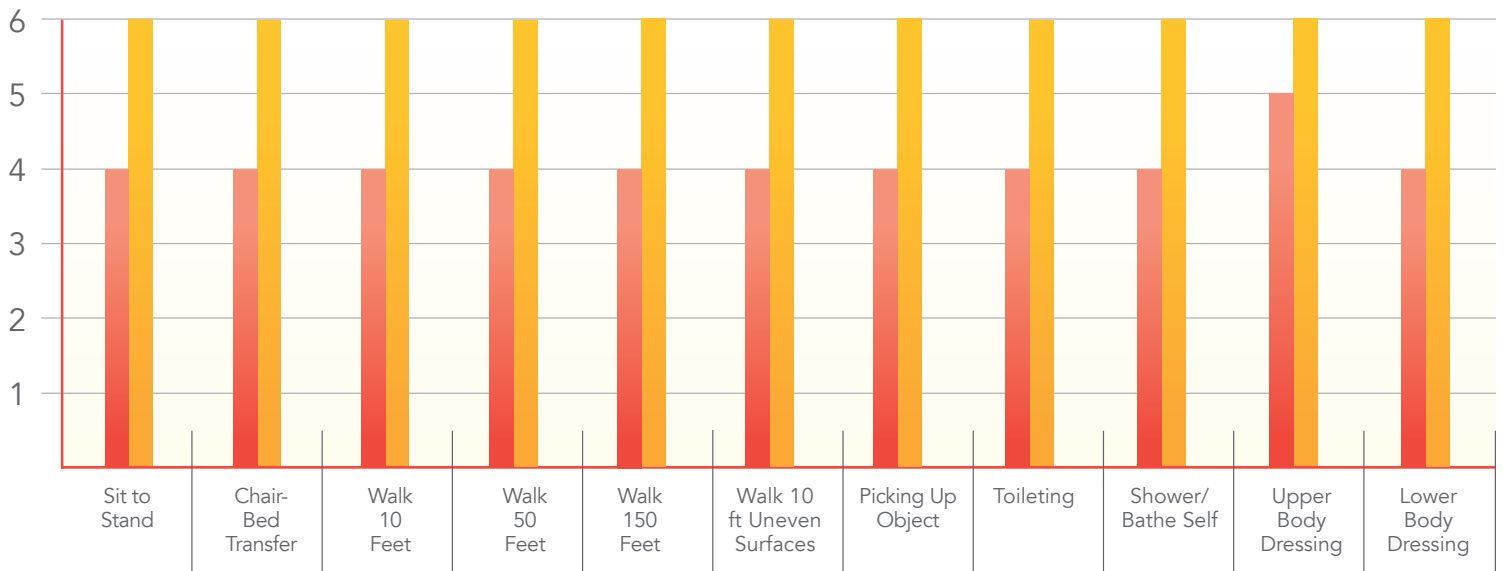

Our experienced team created individualized plans of care for Marvin that focused on treating his impairments. After 30 days of skilled rehabilitation, he demonstrated significant improvement with functional mobility, bed mobility, transfers, ambulation, and activities of daily living. With the help of our nursing team and wound care nurse, the sacral wound healed and the wound vac was removed.

Marvin was able to reach his goals and successfully return home at independent level for ADLs, ambulation, and functional mobility! **Great job, Marvin!**
