

MISSION NURSING AND REHABILITATION CENTER SUCCESS STORY

James W. was admitted to Mission Nursing and Rehab in December 2024 due to a hospitalization for symptomatic bradycardia. His initial therapy assessment indicated impairments in strength, coordination, activity tolerance and balance. He required supervised assistance with bed mobility, minimal assistance with transfers, and was able to walk 50 feet with moderate assistance.

Following a 14-day stay, James made significant improvements in physical therapy by walking up to 500 feet contact guard assist. He is now able to bathe with supervision and dress himself with set-up assistance. James successfully returned home to continue his progress with home health therapy! Congratulations James!

James's Therapy Outcomes
